ITCHY DOGS

FLEAS

MOST COMMON CAUSE OF ITCHING

Fleas truly are the most common reason for itchy pets but here are some other causes.

- Allergies
- Intolerances
- Drug interactions
- Parasites (fungus, bacteria, demodex)

TREAT THE TREATABLE

When it comes to fleas and bacterial or fungal or parasitic things that cause itching, those are very treatable. So that's why we say go to your veterinarian have it checked.

WHY DO THEY ITCH?

IRRITATION OF THE SKIN

About 50% of the time, our pets' itching is due to fleas. (They are allergic to the saliva from the flea bite.)

JUST ONE BITE

Even one bite from a flea can cause them to be very itchy.

LOCATION, LOCATION LOCATION

For flea bites, typically it's behind the ears, on the base of the tail, on the neck or on the abdomen.

Other causes of itching are allergies and intolerances.

Allergies could be something they 1) Breathe in; 2) Come into contact with; 3) Eat

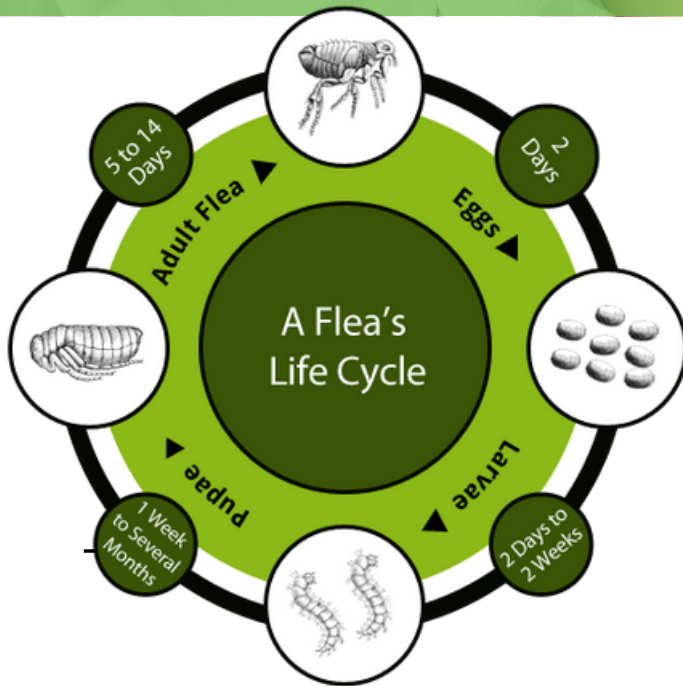

Demodex is a very common parasite that holds on to the hair follicles & can cause them to be very itchy

IF THEY HAVE FLEAS -DON'T PANIC

We're not going to judge

IT DOES NOT MEAN THAT YOU HAVE A DIRTY HOME - FLEAS HAPPEN

Pesky Pests

- Eggs represent 50% of the flea population
- Larvae are 35% of the flea population
- Pupae are 10% of the flea population
- Adults are 5% of the flea population

01

Get fleas out of the home

Get rid of everything you can because fleas can hop back on.

02

Get fleas off all pets

You can use flea and tick shampoo, sprays, medications or treatments

03

Bathe the pets

Bathing helps remove all 4 life stages so eggs aren't spread to the home.

04

Mop the floors & vacuum

For several weeks, mop and vacuum regularly. Seal and remove vacuum bags so eggs don't grow to larvae and pupae and reinfest your home.

Flea & Tick Spray

for Dogs & Cats
